# SCREW COMPRESSOR PACKAGES ASR

## CONSTRUCTION

The compressor package consists of the following main assemblies and functional systems:

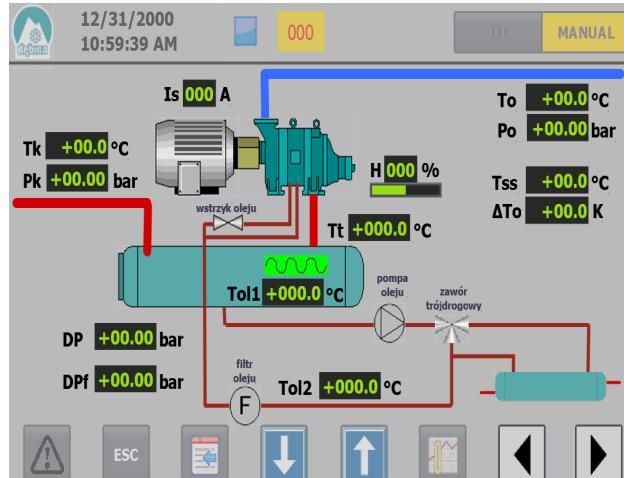

- screw compressor with two rotors of assymetric profile
- electric squirrel -cage motor
- flexible metal coupling
- horizontal oil separator, which also forms a supporting structure of the pacakage and an oil tank
- hydraulic system of lubricating, controlling, cooling etc.
- electric system of controlling and protecting
- system of oil cooling as per an individual selection
- system of stepless capacity regulation within the range of 11 ÷ 100 %
- check-measure and protecting equipment
- stop valve at the suction side and discharge side of the compressor.

The compressor package composes a block unit, functionally adapted to operation in automated refrigerating systems or manually operated ones. Construction of the pacakage is compact and it does not require special foundations or anchor bolts. The shock absorbers, which are delivered together with the package, give high efficiency of damping the vibrations transmitted to the base. While selecting the foundation, it is necessary to take into account static loads.

## ADVANTAGES OF SCREW COMPRESSORS ASR

- Certainty of work: simple construction, very small quantity of moving parts, high reliability
- Comfortable usage: long periods between technical reviews, low noise level
- Economical in exploitation, high coefficient of cooling capacity, limited consumption of oil, automatic adjustment of capacity to the thermal cycle.
- Easiness of operation: automatic work, simple and easy-in-use control panel, possibility of remote control.

## CONTROL AND DRIVE

The compressor package entirely automatically, in a programmed cycle, realises all the start up activities as well as activities related to disengaging the package ( including emergency shutdown ). Operation of the package, including capacity regulation, can be run automatically or manually. All the ASR screw compressor packages are equipped with the microprocessor control system.

Control systems of the package ensure automatic capacity regulation of the compressor depending on assigned working parameters. The current level of capacity is indicated directly on the compressor and on the control panel of the control cubicle. The microprocessor control system can regulate compressor capacity in a function of temperature or evaporating pressure, depending on a kind of an applied sensor.

The screw compressor is driven by an electric squirrel-cage motor selected in accordance with requirements at specified working parameters (to, tm, tk), i.e. from 50 to 1100 kW and power supply: 3/400 V, 50 Hz or other.

## ECONOMISER

In order to increase refrigerating capacity and to improve efficiency of the refrigerating system, in which screw compressors operate, it is possible to apply the economiser system.

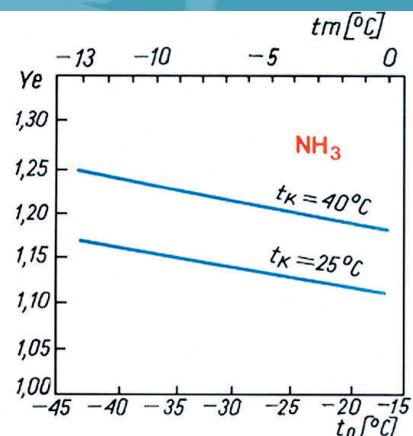

All the ASR compressor packages are adapted to operate in the economiser system.

Refrigerating capacity of the ASR packages operating in the economiser system:

$$Q_e = Y_e \times Q_o$$

where:  $Q_o$  – refrigerating capacity as per the table

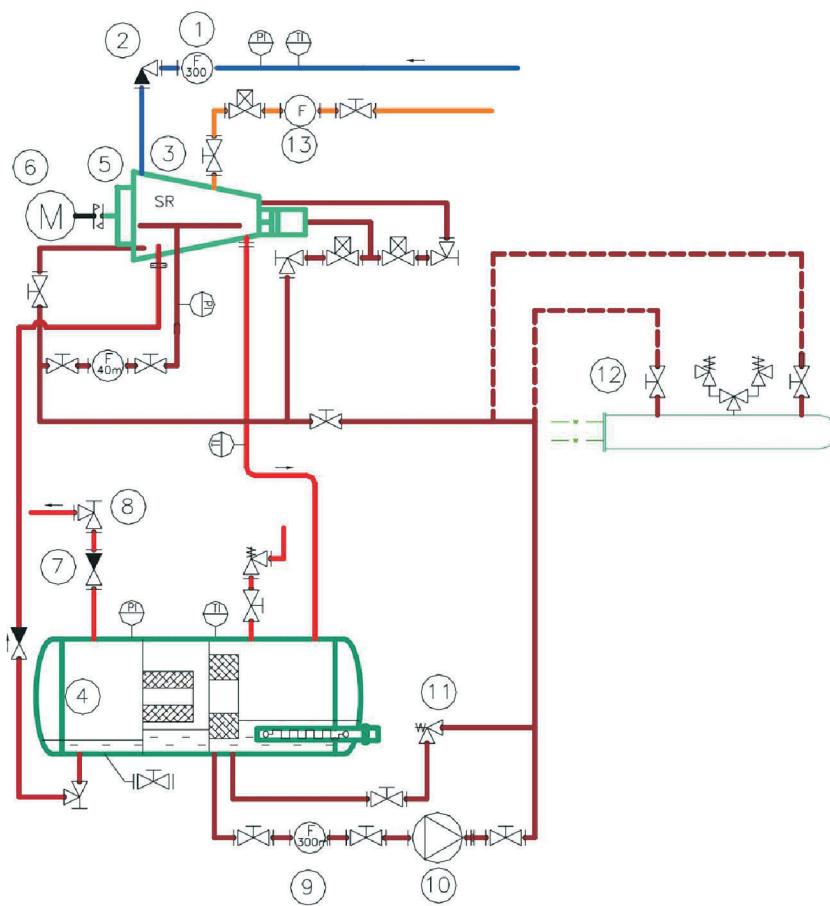

$Y_e$  – refrigerating capacity coefficient of the economiser from the diagram

## MAIN TECHNICAL DATA OF COMPRESSORS

Specification	Unit of measure	Compressor					
		SR163	SR163F	SR204	SR204F	SR255	SR255F
Diameter of rotors	mm	163		204		255	
Ratio of rotor length to diameter	-			1,65			
Theoretical volume capacity	m³/h	610	910	1200	1790	2340	3490
Revolutions	1/min			2950			
Built-in volume ratio	-			2,6 - 3,5 - 4,8 wg potrzeb			
Capacity regulation	%			11 ÷ 100%			
Weight	kg	750		1000		1500	

# DIAGRAM OF SCREW COMPRESSOR PACKAGE

## DESCRIPTION OF DIAGRAM

- 1 – Gas suction filter
- 2 – Stop and check valve
- 3 – Screw compressor
- 4 – Oil separator
- 5 – Flexible coupling
- 6 – Motor
- 7 – Check valve
- 8 – Stop valve
- 9 – Oil filter
- 10 – Oil pump
- 11 – Oil overflow valve
- 12 – Oil cooler  
(water or thermosiphon one)
- 13 – Injection system

Note: items 12 and 13 do not have to be applied simultaneously, they can be applied as separate options.

## REFRIGERATING CAPACITY AND POWER REQUIREMENT

$$N_e = N_e \text{ (from the table)} \times k$$

$$Q_o = Q_o \text{ (from the table)} \times k$$

przy czym dla:      ASR163A → k = 0,512      ASR204A → k = 1,000      ASR255A → k = 1,953  
 ASR163AF → k = 0,763      ASR204AF → k = 1,492      ASR255AF → k = 2,913

ASR255	200	150	80	1600	1220	3030	1320	580	1210	2100	2625	220	590	3600	6500-8000

\*) It refers to packages operating in the economiser system

\*\*) weight of package (without oil) depending on the size of motor

## DESIGNATION

In an order, it is necessary to specify the type of a selected package as per the below shown code:

**A SR** ... - .

Oil cooling:  
 - injection of liquid refrigerant  
 - thermosiphon cooler  
 - water cooler

Version of package to operate:  
 - at the low stage - N (booster)  
 - at the high stage - W

Execution: A, AF

Diameter of rotors

Screw compressor

Package

## WYPOSAŻENIE DODATKOWE

- on request
- electric cubicle for starting up motors
- economiser
- thermosiphon tank
